ABOUT SIGA TECHNOLOGIES, INC. and TPOXX[®]

SIGA Technologies, Inc. is a commercial-stage pharmaceutical company focused on the health security market. Health security comprises countermeasures for biological, chemical, radiological and nuclear attacks (biodefense market), vaccines and therapies for emerging infectious diseases, and health preparedness. Our lead product is TPOXX[®], also known as tecovirimat and ST-246[®], an orally administered and IV formulation antiviral drug for the treatment of human smallpox disease caused by variola virus. TPOXX[®] is a novel small-molecule drug and the U.S. government maintains a stockpile of TPOXX[®] for treatment of smallpox. Over the past decade, the U.S. government has procured, or has current orders for, approximately \$705 million of TPOXX[®] for national preparedness. The oral formulation of TPOXX[®] was approved by the FDA for the treatment of smallpox in 2018. ABOUT SMALLPOX¹

Smallpox is a contagious, disfiguring and often deadly disease that has affected humans for thousands of years. Naturally occurring smallpox was eradicated worldwide by 1980, the result of an unprecedented global immunization campaign. Samples of smallpox virus have been kept for research purposes. This has led to concerns that smallpox could someday be used as a biological warfare agent. A vaccine can prevent smallpox, but the risk of the current vaccine's side effects is too high to justify routine vaccination for people at low risk of exposure to the smallpox virus.
